

BROWN UNIVERSITY
CONSENT FOR RESEARCH PARTICIPATION
Prolific PROTOCOL
Version 2; August 31, 2020

Title of Project: Study of Economic Decision Making

Investigator: Dr. Oriel FeldmanHall

KEY INFORMATION:

You are invited to take part in a Brown University research study. Your participation is voluntary.

- **PURPOSE:** The purpose of the study is to examine the psychology of economic decision-making.
- **PROCEDURES:** You will be asked to fill out a number of personal questionnaires (which will not be reviewed in real-time), as well as play some computer games.
- **TIME INVOLVED:** This study will last a maximum of 1 hour.
- **COMPENSATION:** You will be paid a base rate of \$8.00/hr. In addition to this compensation, you may receive additional compensation in the form of monetary rewards based on your choices and/or performance on the computer tasks.
- **RISKS:** You may experience some fatigue from operating a computer or small objects. You may find some of the visual or auditory stimuli in today's session distressing or uncomfortable. Some of the questions may stir negative personal memories, which you may find unpleasant.
- **BENEFITS:** You will not directly benefit from being in this research study.

Researchers:

This study is being performed by Dr. Oriel FeldmanHall and her research team.

What is this study about?

The purpose of the Brown University research study is to examine the psychology of economic decision-making. We hope the research will help us to increase our understanding of how certain decisions are made within various settings. In order to participate, you must be between 18 and 65 years old.

What will I be asked to do?

Before you decide to partake in this task, it is important for you to understand why the research is being done and what it will involve. Please take time to read the following information carefully. Take the time to decide whether or not you wish to take part. Participation in this study is completely voluntary, and you may withdraw at any point.

Some details of the task may be withheld until after the experimental session is over. At that time, we will fully explain the goals and details of the study.

The study involves a series of tasks that explore decision-making. You will be asked to fill out a number of questionnaires and/or perform a series of computerized decision-making tasks, which are explained below.

Questionnaire Based Task

If you agree to participate in this study, you will be asked to complete some questionnaires about your emotions, social and economic preferences, and your demographic information.

Social Economic, Reward, and Punishment Task

If you agree to participate in this study, you will be presented with a series of decisions about money that you can win or lose based on your choices. You may also be asked to make monetary decisions on behalf of others, and your decisions may be used in studies with future participants. Please note that you will be eligible for a completion bonus in this task.

Therefore, you will be asked to complete any or all of the following procedures, and to have the following behavioral assessments collected:

- ☐ Listen and/or respond to auditory stimuli
- ☒ Explicit memory choices
- ☐ Explicit choices between options
- ☒ Reaction times
- ☐ Ratings of stimuli
- ☐ Questions about depression, anxiety, and the emotions you may be feeling
- ☒ Demographic information: We will ask you to provide some general demographic information about yourself. This information may include age, gender, race, education, etc.

Will I be paid?

You will be paid a base rate of \$8.00/hr. In addition to this compensation, you may receive additional compensation in the form of monetary rewards based on your choices and/or performance on the tasks.

What are the risks?

Computer-based and physical experiments only involve operating a desktop computer or handling small objects. The tasks involved in these experiments can require some mental effort, and you may therefore experience some fatigue during the experiment.

There is a risk that you may find some of the visual or auditory stimuli in today's session distressing or uncomfortable. You may also find some of the questions distressing or uncomfortable, as they may bring up negative memories.

There exists a potential risk of embarrassment should your responses in this study become publicly associated with your identity. This risk is minimized in the following ways: 1) data we collect from you that could be used to identify you is stored separately from data that contains your responses in this study; 2) anonymized study IDs are assigned to your responses instead of direct identifiers on all study documents; 3) access to data that could be used to identify you is strictly restricted to trained members of the research team; 4) any data that is shared with other researchers will be completely anonymized and analyzed only in aggregate, so that you can never be personally identified from shared data.

How will my information be protected?

To protect your identity, and to prevent your responses in this study from being associated with your identity, all data is completely anonymized (identified by a code), with identifiable information kept in an encrypted electronic database. Only qualified members of the research team will have access to data that could be used to identify you. Personal identifiers will be kept in our electronic database until the conclusion of the study, or until you indicate that you no longer wish to participate in this study.

Data may be digitally shared with other researchers. Any data that is shared will be completely de-identified, such that your responses can never become publicly associated with your identity.

To help us protect your privacy, we have obtained a Certificate of Confidentiality from the National Institutes of Health. The researchers can use this Certificate to legally refuse to disclose information that may identify you in any federal, state, or local civil, criminal, administrative, legislative, or other proceedings, for example, if there is a court subpoena. The researchers will use the Certificate to resist any demands for information that would identify you, except as explained below.

You should understand that a Certificate of Confidentiality does not prevent you or a member of your family from voluntarily releasing information about yourself or your involvement in this research. If an insurer, medical care provider, or other person obtains your written consent to receive research information, then the researchers will not use the Certificate to withhold that information.

The Certificate of Confidentiality will not be used to prevent disclosure to state or local authorities of child abuse and neglect, or harm to self or others.

What if I want to stop? What are my rights as a participant?

Taking part in research is voluntary. You do not have to be in this study if you do not want to be. Even if you decide to be in this study, you can change your mind and stop at any time. If you refuse to participate in or leave the study, your current or future relationship with Brown University will not be affected. If you withdraw from the study before completing the study session, you will receive full payment.

Who can I talk to if I have questions about this study?

If you have any questions about your participation in this study, you can contact members of Dr. Oriel FeldmanHall's research staff at 401-863-5658 or at feldmanhall.lab@gmail.com. You can also contact Dr. Oriel FeldmanHall at 401-863-5235 or at oriel.feldmanhall@brown.edu.

Who can I talk to if I have questions about my rights as a participant?

If you have questions about your rights as a research participant, you can contact Brown University's Human Research Protection Program at 401-863-3050 or email them at IRB@brown.edu.

You may print this page for your records.
